### **Abstract**

This project provides a shell-like interface for navigating and extracting data from HDF5 files. For large files (multiple GB and higher), it boasts a much higher performance than the native HDF5-provided command line tools.

This project was motivated by both technical and user requirements. First, when using `h5ls` on parallel filesystems with very large data files, I found the performance to be abysmal for even a single application of `h5ls`. Second, when introducing HDF5-formatted output files to engineering analysts used to large ASCII text files, an intuitive way of accessing the output data was needed to lower their barrier to entry. The `h5sh` utility attempts to solve both of these problems by providing an efficient tool to naturally explore arbitrarily large HDF5 data files.

## 1.1 Installation

As of this writing, `h5sh` has not been submitted to PyPI, so it must be installed from source.

### 1.1.1 Stable release

To install `h5sh`, run this command in your terminal:

```
$ pip install h5sh
```

This is the preferred method to install `h5sh`, as it will always install the most recent stable release.

If you don't have `pip` installed, this [Python installation guide](#) can guide you through the process.

### 1.1.2 From sources

The sources for `h5sh` can be downloaded from the [Github repo](#).

You can either clone the public repository:

```
$ git clone git://github.com/sethrj/h5sh
```

Or download the [tarball](#):

```
$ curl -OL https://github.com/sethrj/h5sh/tarball/master
```

Once you have a copy of the source, you can install it with:

```
$ python setup.py install
```

## 1.2 Usage

This package is meant to be used through the command-line interface (CLI) via the `h5sh` command.

## 1.3 Contributing

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

You can contribute in many ways:

### 1.3.1 Types of Contributions

#### Report Bugs

Report bugs at <https://github.com/sethrj/h5sh/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

#### Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” and “help wanted” is open to whoever wants to implement it.

#### Implement Features

Look through the GitHub issues for features. Anything tagged with “enhancement” and “help wanted” is open to whoever wants to implement it.

#### Write Documentation

h5sh could always use more documentation, whether as part of the official h5sh docs, in docstrings, or even on the web in blog posts, articles, and such.

## Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/sethrj/h5sh/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

### 1.3.2 Get Started!

Ready to contribute? Here's how to set up *h5sh* for local development.

1. Fork the *h5sh* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/h5sh.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv h5sh
$ cd h5sh/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

```
$ flake8 h5sh tests
$ python setup.py test or py.test
$ tox
```

To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

### 1.3.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.

2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 2.7, 3.4, 3.5 and 3.6, and for PyPy. Check [https://travis-ci.org/sethrj/h5sh/pull\\_requests](https://travis-ci.org/sethrj/h5sh/pull_requests) and make sure that the tests pass for all supported Python versions.

### 1.3.4 Tips

To run a subset of tests:

```
$ py.test tests.test_h5sh
```

### 1.3.5 Deploying

A reminder for the maintainers on how to deploy. Make sure all your changes are committed (including an entry in HISTORY.rst). Then run:

```
$ bumpversion patch # possible: major / minor / patch
$ git push
$ git push --tags
```

Travis will then deploy to PyPI if tests pass.

These are the available commands and descriptions inside the h5sh package grouped roughly into categories.

## 2.1 Navigation

### 2.1.1 `cd`

### 2.1.2 `ls`

### 2.1.3 `pwd`

Print the path to the current HDF5 group.

### 2.1.4 `l`

Alias for `ls -l`.

### 2.1.5 `up[p[...]]`

Shorthand for `cd ../..[...]` to traverse upward in the directory hierarchy. For example, `uppp` is a more typing-friendly equivalent to `cd ../../..`.

## 2.2 Query

### 2.2.1 attr

### 2.2.2 dump

## 2.3 System

In addition to the system “commands”, you can use `control-C` to clear the current command line and `control-D` to exit h5sh.

### 2.3.1 exit

Exits the h5sh shell.

### 2.3.2 help

Lists all available commands.

### 2.3.3 filename

Print the name of the file being examined.

# APPENDIX A

---

## History

---

### **A.1 0.1.1 (2019-12-05)**

- Fix some dependencies

### **A.2 0.1.0 (2019-12-05)**

- Complete initial capability, documents, and testing.

### **A.3 0.0.1 (2018-12-07)**

- Created cookiecutter package.

## APPENDIX B

---

Authors

---

### B.1 Development Lead

- Seth R Johnson <[johnsonsr@ornl.gov](mailto:johnsonsr@ornl.gov)>

### B.2 Contributors

None yet. Why not be the first?

## APPENDIX C

---

### License

---
